

# Initially

Looked at integrating calendar information:  
Facebook events, Google Calendar...

# Wormhole

- Should be technically possible...
- But instructions on web were showing how to do it manually rather than through an API (automatic)

# “Actionable”

- Backtracked a bit...
- Looked at something that could be made with (initially) the least coordination from outside parties
- Also technically “simple”
- Went back to a map starting from a postcode...

Enter Postcode:  
LS12 1SF

Lunch clubs.csv Community support ....csv Neighbourhood Net....pdf Show all downloads...

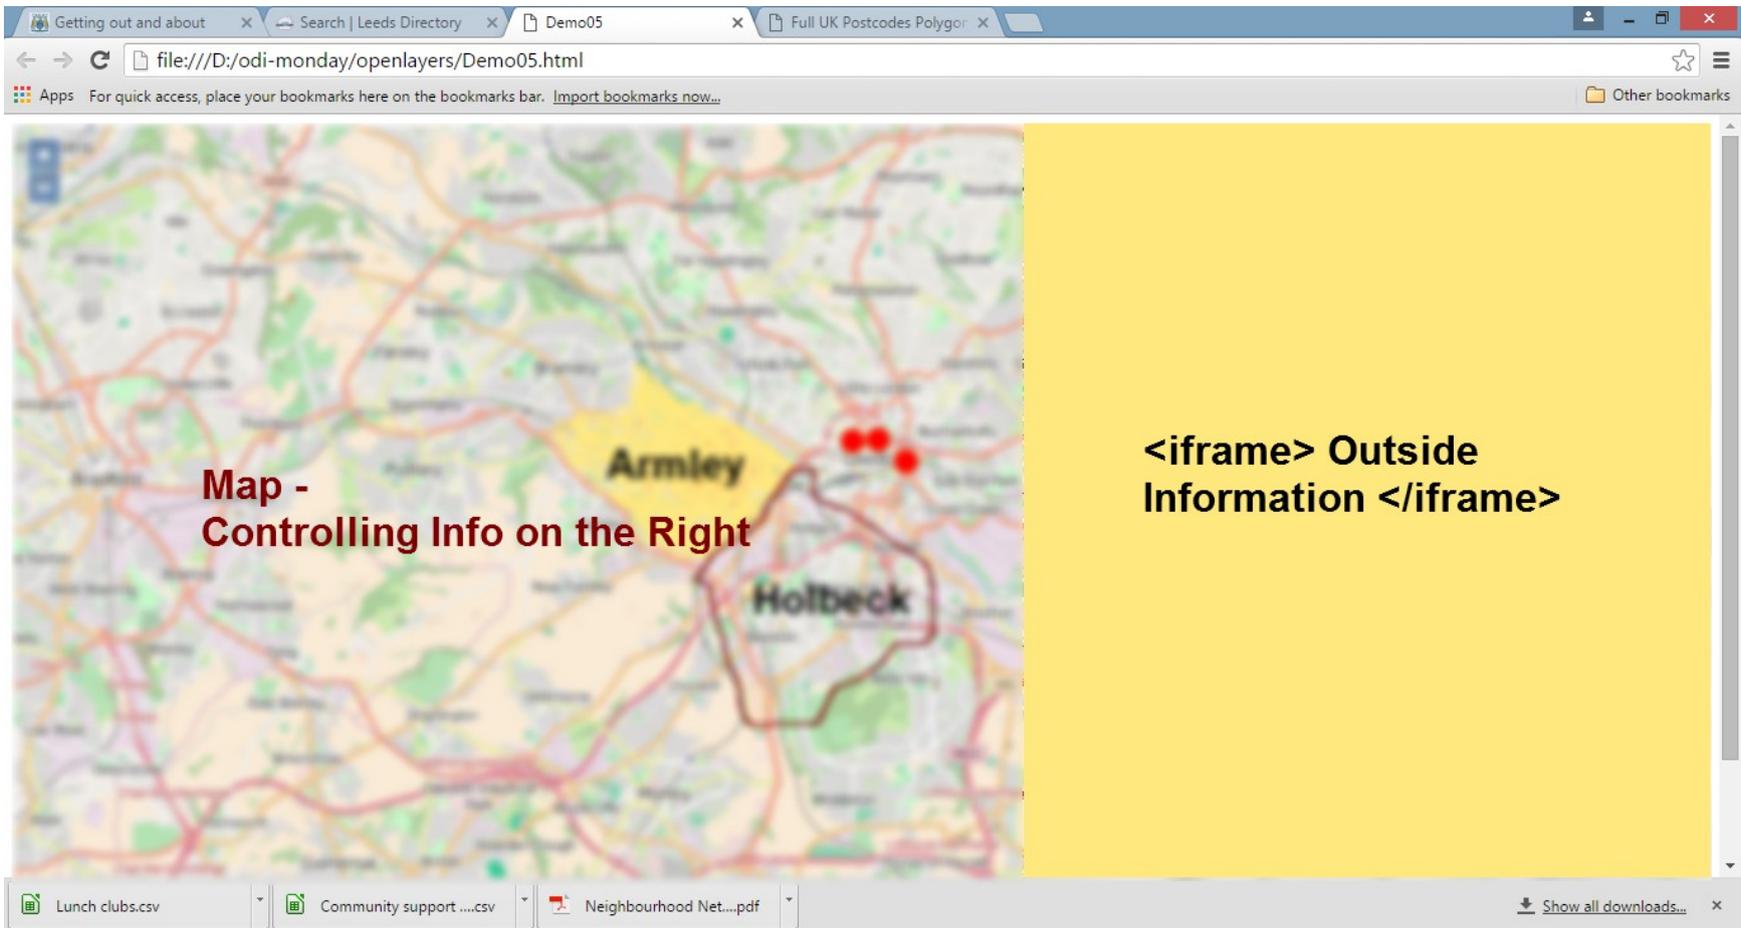

Detailed description: The image shows a web browser window displaying a map of the Leeds area. The browser's address bar shows the file path 'file:///D:/odi-monday/openlayers/Demo05.html'. The map features a yellow rectangular overlay with the text 'Enter Postcode:' and 'LS12 1SF'. The map itself shows various streets, green spaces, and landmarks like 'RSPB St. Aidan's'. At the bottom of the browser window, there is a download bar with three items: 'Lunch clubs.csv', 'Community support ....csv', and 'Neighbourhood Net....pdf', along with a 'Show all downloads...' link.

# Start with existing data

- Took the Neighbourhood Network Schemes list of contacts
- Can use a map as a “portal” to find most relevant group (maybe nearest, maybe most accessible...)
- *A map is a more fun interface than a search box*

# Simple technology

- Start with a simple text box to enter postcode (as simple as Google...)
- Use an `<iframe>` to split the screen in two halves: one half is the map, the other half is a regular web page

**Map -  
Controlling Info on the Right**

**`<iframe> Outside  
Information </iframe>`**

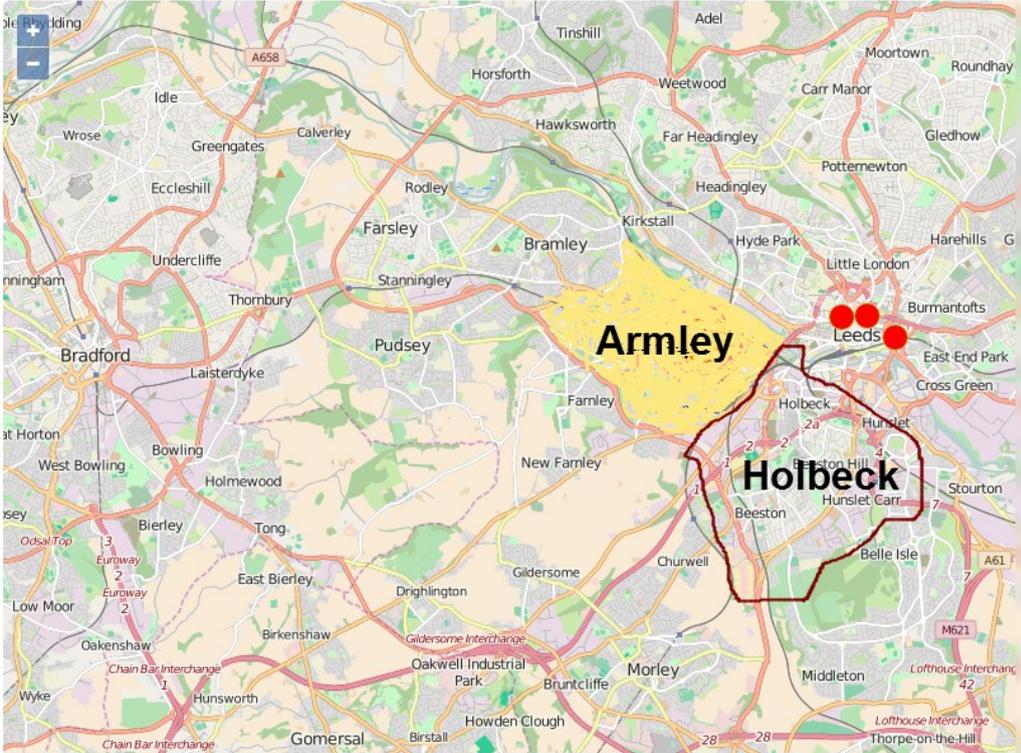

# Map – Navigation (Left)

- Use the map for navigating:
- *Finding a local organisation*
- *Seeing distance form home, route etc.*

# Web page – Information (Right)

- Right panel is a regular web page
- First page will be standard information: address, telephone number, email
- Hyperlinks work as per normal web pages, so we can have Facebook feeds, Calender data etc. without (initially) worrying about data integration
