

## Frequently Asked Freedom Of Information Questions for school admissions in Leeds.

**FAFOIQ** uses the open datasets available to answer frequently asked FOI requests so that officers are able to point requesters to a link instead of doing the search that they may have done previously themselves.

Questions are presented in a clear, friendly and easy to read layout with extra information about the data provided.

Existing datasets do not need to change to create this but they are able to grow to include other information that are focused for future questions.

A user simply chooses a school and the page will be populated with questions and answers relating to that particular school.

Other methods of search like choosing multiple schools and period of years are available additions to the page. Users can also adjust the question to suit their needs; *ie. Priority 1 to Priority 2 etc*, as it uses a simple template for searching.

New questions can be added to the database to create a growing encyclopedia with links ready for sharing via email and tweets. A link to similar questions on [whatdotheyknow.com](http://whatdotheyknow.com) and other similar sites can also be added.
